Stage One Report: Target, R30 and R20–R23

Oct 14, 2026 · @Shantha

Stage one ran on 14 October 2026 between 20:15 and 21:10 UTC, on the approved target only. Labels: **[Observed]** is a value read on the target in this run; **[Deduced]** is reasoning from observed values; **[Proposal]** is a suggestion for your decision that has not been carried out.

1. Target verification

The target matches A2 section 3 on every item, checked twice: at 20:15–20:25 UTC and again at 20:40 UTC at your request. **[Observed]**

Item	Expected (A2 section 3)	Observed on the target
Computer and folder	your computer; C:\wamp64\www\avenir, read-only	device shanthaw; that folder, mounted in the linked shell as mnt/avenir
Application address (F0)	http://localhost/avenir/	App.php line 19: `http://localhost/avenir/`; .env line 17: `CI_ENVIRONMENT = production`; no app.baseURL in .env
Connection settings (F1)	localhost, port 3306, schema avenir	default group: localhost, avenir, MySQLi, pConnect false, 3306. Groups `inquiries` and `avenir_2024`: localhost, 3306, not read. SQLite group commented out. No database keys in .env
Code	the code R0 read	all 2,487 files in app/ and public/ have the SHA-256 values of R0′s final manifest (08:01 UTC today)
T1	version 8.4.7, schema avenir	8.4.7, port 3306, schema avenir, account **root@localhost**
T2	one row	one row: avenir
T3	every listed column	all 32 listed columns present; 36 rows returned

Item	Expected (A2 section 3)	Observed on the target
Connection used	phpMyAdmin 5.2.3, signed in by you	http://localhost/phpmyadmin5.2.3/, server 1 (MySQL); already signed in when opened, so no password was seen, typed or stored

T3's four extra rows are account_runing's and account_runing_2024's own `aflag` and `Bank_Date` columns. The column-name match ignores case. Each statement was checked before sending: one statement, beginning SELECT. The nine R20–R23 statements were sent with the label lines removed. Their SHA-256 matched the A2 text.

2. R30: route and internal-call inventory

Every path in A2 section 4a exists on the target as described, and no route reaches them another way. The only changes are lower line numbers in the desk controller and some callers A2 did not list (section 3). **[Observed]**

Which routes load (F2).

- Routing.php loads only app/Config/Routes.php, with `autoRoute = false`. Feature.php has `autoRoutesImproved = false`.
- Routes.php requires five files, at lines 1583–1586 and 1589: Routes.hotel_rate_v2, .help, .mailbox, .tourmail and .tour_flow.
- Modules.php has discovery on, including in Composer packages. The only namespace in Autoload is App.
- No package under a mapped namespace has a Config/Routes.php. The one under vendor/codeigniter4/framework/app is the framework's starter app and is not mapped.
- Routes1.php, Routes1 (2).php, Routes shakya.php and app1/Config/Routes.php exist, but nothing requires them.

Routes to the 4a controllers (F3). There are 136 route lines, and their output is identical to the code copy's (SHA-256 b750afc81f8c3c8b).

#	Route (POST)	Method on the target [file:line]	Callers on the target	Against A2 4a
V1	accounts/voucher_auth/update	VoucherPaymentController::update :348	voucher_print.php:430; bank_payment_check.php:684, 718	as A2

B1	tour/reserve_hotel/cancel_booking	HotelManagementController:: cancel_reservation :342; deletes the accrual :409	booking_details.php:2540; the forecast page's call is commented out (:1812)	as A2
A1	tour/reserve_hotel/confirm_reservation	:215	booking_details.php:2279; forecast call commented out (:1562)	as A2
A2	tour/tour_accounts/payment_request; master_files/offer_selection/release	TourAccountsController :890, :903 → confirmHotelReservation :2881; release route at Routes.hotel_rate_v2.php:110	request pages	as A2
M	settings/manual_update/*	ManualUpdateController; Routes.php:410–422	manual_update.php:143–273	as A2

Internal calls (F4). There are 104 matches, as in the copy. Only the payment desk calls another controller's method.

- Desk internal calls: :701 (Q1), :765 and :831 (P1), :978 and :1098 (P4), :1458 (V1).
- The desk also calls its own methods: initiate at :283 and paid at :354. At :77 it creates the dashboard controller for read-only use.
- Every other `new …Controller()` creates a mail, SMS, print or itinerary controller, never a 4a controller.
- Outside the desk, the lines match the copy except NewDashboardController.php. That file differs only in line endings: CRLF on the target, the same SHA-256 once those are removed.

What the pages send (F10). The value sent as voucher_no is the voucher number, which confirms A2 4c.

- bank_payment_check.php fills `data-pr-id` with `$vnum = $row['Vnum']` (:198, :338, :351). On the petty-cash rows it uses `$pv->Voucher`, which the model selects as `Vnum As Voucher`.
- Approval sends it as voucher_no at :692 and rejection at :722.
- voucher_print.php sends voucher_no, payee and sup at :437–439.

Files that differ from the copy (F11). 41 of the 44 files match. The other three contain only test code in the copy:

- The `fail_at` failure hook: desk :188, Bulk.php :222, Vouchers.php :122–124 and its docblock.
- A prototype switch in batch_create, 21 lines, active only with `TPD_WRITER_PROTO=1`.

The target has neither. On the target, batch_create always raises vouchers through the internal call to P4.

3. R30: what A2 section 4a does not list

No route authorises or cancels an authorised voucher, or approves or rejects a payment request, other than those in section 2. Six routes that A2 does not list (five rows below) do raise, delete or re-point vouchers or post journals outside those definitions. **[Observed]**

Route (POST)	Method [file:line]	What it writes	Caller	Existing check
dashboard2/transport/driver_advance/delete_advance	DriverAdvancePaymentController :383	deletes a driver-advance voucher and its lines (:407, :409) and resets the tour's advance marker	transport_advance.php:784	refuses unless Aflag is 0, and refuses for a cancelled tour

Route (POST)	Method [file:line]	What it writes	Caller	Existing check
tour/reserve_hotel/hotel_payment	HotelManagementController :480	raises a voucher at Aflag 0 and sets the night's hotel_payment_flag to 10, outside the payment-request flow	booking_details.php:2477	not read in detail
tour/tour_accounts/accept_approved_expenses	TourAccountsController :2239	posts journals (insertBatch into the ledger) and raises a voucher at Aflag 0 (:2459) for driver expenses	approved_expenses_report.php:521; payment_approval_v2.php:1476	not read in detail
tour/tour_payment_dashboard/bulk_create	desk :146 → Bulk.php	raises vouchers at Aflag 0 for requests already at status 4 or 6 (Bulk.php:64). On failure it deletes them and their lines (:240–246)	tpd_payables.php:328	status 4 or 6 only
tour/tour_payment_dashboard/initiate, /bulk_initiate	desk :1176, :228	changes a pending voucher's bank and bank ledger code (:1285)	desk pages	Aflag 0 only

Callers that A2 did not list.

- payment_requested_report_new.php:709 is a second call of P1.
- Every other caller found is already in A2 4a, or is a desk page that 4a gives as "Tour Payment Desk".

Matches that are not callers. These lines match the F9 pattern but call nothing:

- "lunch_pay" inside the variable name `lunch_payments` (acc_reservation_card_print.php, tour_accounts_note.php, tour_accounts_note_all.php);
- the form id `create_bulk_voucher_form` and a comment (payment_approval_v2.php:1007, 1279, 1577);
- the commented-out forecast calls.

The desk pages build their addresses as `TPD_URL + action`, so F9's literal pattern finds none of them. They were found by a second search for `postJson('<action>')`.

4. R20–R23 results

Eight of the nine statements completed in under 1 second each. R20.2 ran for 36 minutes (20:32–21:08 UTC) and phpMyAdmin returned no readable result (section 9). Every row count matched phpMyAdmin's own "Showing rows" total. **[Observed]**

R20.1 and R20.3: authorisation journals under the voucher number

R20.1 found 5,974 authorised vouchers with no “VOUCHER PAYMENT” row under their number in account_runing. Of these, 2,053 do have such rows in account_runing_2024. That leaves **3,921 vouchers found in neither table by number**. R20.3 returned **0**: no current ledger row repeats a 2024 row.

Voucher year	Not in account_runing	Found in account_runing_2024	Found in neither
2024	1,955	1,291	664
2025	3,105	762	2,343
2026	914	0	914
Total	5,974	2,053	3,921

The monthly split from R20.1 shows where the 2024 table stops covering:

- **Mar 2024 to Mar 2025:** 1,291 + 762 found by number in the 2024 table. Coverage rises from about 30% (Apr–May 2024) to 100% from Nov 2024.
- **Apr 2025 to Apr 2026:** none found in either table by number. The months are Apr 214, May 128, Jun 172, Jul 296, Aug 432, Sep 321, Oct 274, Nov 171, Dec 335, Jan 286, Feb 334, Mar 292 and Apr 2026 2.

R21: the 8 unbalanced journals

Journal	Legs [ledger code Dr / Cr]	Dr	Cr	Date	Entered	Type	Voucher	Tour or invoice	Login id
24654	6-9-11-11590 Dr / 1-6-8-10380 Cr	5,000.00	6,000.00	2026-06-10	2026-06-12 13:31	voucher payment	6785	1777	37

R22: the 30 future-dated rows

R22.1 returned 30 rows, dated 4 Jan 2027 to 16 Apr 2525. They form 15 journals of two legs each, and every journal balances. R22.2 returned the same 30 rows: no journal has a leg with an ordinary date. The 15 journals total LKR 6,273,230.00 on each side.

Journal	Date	Entered	Dr ledger	Cr ledger	Amount	Type	Voucher	Tour or invoice	Login id
28694	2027-01-04	2026-09-02 10:22:03	4-8-106-10386	6-9-11-11659	123,310.00	hotel reservation accrual	0	2209	1

25669	2525-04-16	2026-07-06 10:46:33	1-6-8-10380	4-8-106-10385	25,000.00	other	0	1	39

The “Tour or invoice” column holds free text on some rows. That text is summarised here; none of it names a person.

R23: vouchers with sup = 0

R23.1 returned 38 authorised vouchers with sup = 0, dated 10 Jul to 31 Aug 2026. Their voucher amounts total **LKR 6,535,170.97**.

- **36 bank transfers** (LKR 6,527,183.32): all carry bank ledger code 1-6-8-10380, and all are finalized with a bank date.
- **2 petty-cash vouchers**, 7694 (720.00) and 7866 (7,267.65): no bank code, not finalized, no bank date.
- Voucher 7778 has a bank date (13 Aug) one day before its voucher date (14 Aug).

- The full list of 38 is in section 9.

R23.2 returned one voucher awaiting authorisation with sup outside 1 and 2:

Voucher	Voucher id	Date	sup	Type	Amount
7870	7881	2026-08-18	0	Bank Transfer	42,625.64

5. Differences from the expected findings

One figure differs: R23.1′s voucher total is LKR 298,375.00 lower than R0′s figure. R20.2 gave no result, and R30 found six routes A2 does not list. Everything else matched or only added detail. **[Observed]**, except where marked.

Check	Expected (A2, from R0)	Observed	Difference
T1 account	the account you sign in with	root@localhost	none; noted because root can write (section 7)
T3	every listed column	all 32, plus 4 rows matched regardless of case	none
4a paths	as in the code copy	all present; desk line numbers 13 to 21 lower from :975	expected: the copy′s test code
Other routes	not predicted (A2 4a lists the copy′s paths)	6 routes in section 3	new
Copy comparison	only the desk, Bulk.php and Vouchers.php differ	NewDashboardController.php also differs, in line endings only	new; harmless
R20.1	5,974 (2024: 1,955; 2025: 3,105; 2026: 914 = Jan 286, Feb 334, Mar 292, Apr 2)	exactly that	none; adds 2,053 found in the 2024 table
R20.2	a count of candidates	ran 36 minutes; the response held no result table	not available
R20.3	0 [Deduced]	0	none

Check	Expected (A2, from R0)	Observed	Difference
R21	8 journals, including 24654 (5,000 / 6,000) and 25804 (10,000 / 5,000)	exactly that	none; adds the other six
R22.1	30 rows, latest 16 Apr 2525; the 2029 credit of 4,788,575.00 among them [Deduced in A2]	exactly that: journal 11851, 20 Mar 2029, Cr 1-6-8-9750	none
R22.2	the 2029 credit's other legs, if any, and whether they balance	one other leg, Dr 8-35-111-10780 4,788,575.00; all 15 journals balance	none
R23.1	38 vouchers, LKR 6,833,545.97, 10 Jul – 31 Aug 2026, 36 finalized	38 vouchers, **LKR 6,535,170.97**, same dates, 36 finalized	**−298,375.00**
R23.2	one pending voucher with sup = 0	voucher 7870, LKR 42,625.64	none

The R23.1 difference. R0's 6,833,545.97 was not a sum of voucher amounts. It was the sum of the ledger credits to 1-6-8-9750 for these 38 vouchers (R0 evidence, lines 9–10). R23.1 sums the vouchers' own amounts. The ledger credits are therefore LKR 298,375.00 more than the vouchers. That is exactly the amount of voucher 7134. Which ledger rows make up the excess was not read; it needs one more statement (section 8).

6. Deductions

Each point below is reasoning from the observed values. None is established, and each is for the accountant's review. **[Deduced]**

1. **The future dates look like typing errors in the year.**
   - Journals 26516–26519 were entered on 24 Jul 2026 but are dated Jul 2027.
   - 25668 and 25669 are dated 2525.

- 11851 was entered on 18 Jul 2025 but is dated 2029.
- The old journals (5915–11851) are in the current table only because of their dates. They were probably left there when earlier rows moved to account_runing_2024, since R0 found the current table otherwise starts on 27 Jan 2026.

2. **Two pairs look like double postings.**
   - 28694 and 28695: tour 2209, same codes and LKR 123,310.00, 80 seconds apart.
   - 25668 and 25669: same codes and LKR 25,000.00, 6 seconds apart.
3. **Journals 24654 and 24734 (both tour 1777) look like one entry error across two journals.** They are out by 1,000 in opposite directions, and together they balance at 11,000 each side.
4. **Three accrual credits have lost their debit leg** (27724 and 27725 for tour 1491; 28358 for tour 1959). The missing leg would be 4-8-106-10386.
   - Rejecting a request deletes accrual legs by tour and by L_Code in (4-8-106-10386, the request's hotel account): TourAccountsCheckController :672–676 and :1663–1667.
   - If the request's hotel account differs from the accrual's credit code, only the debit leg is deleted.
   - The two deletes also select the tour differently: by Invoice_Num at :674 (P1), by index_no at :1665 (P2).
5. **Journals 25915 and 25918 are opening bank balances posted without a contra entry.** They are LKR 497,850.38 to 1-6-8-10380 and LKR 161,135.32 to 1-6-8-10898, both dated 1 Apr 2026.
6. **The 36 finalized sup = 0 bank transfers name 1-6-8-10380 as their bank, but R0 found the bank ledger was never credited.** That ledger is then overstated by up to LKR 6,527,183.32 unless corrected elsewhere. Voucher 7870 would add LKR 42,625.64 if authorised as it stands.
7. **The ledger credits for the sup = 0 vouchers exceed the vouchers by exactly one voucher's amount (7134, LKR 298,375.00).** That points to one authorisation posted twice, or a credit under the wrong voucher number.
8. **Of R20.1's vouchers, all 3,257 dated April 2025 to April 2026 are found by number in neither ledger table, as are 664 from 2024.** Of these, 628 are from Feb–Apr 2026, a period the current table covers. Over the same months, other vouchers do have rows under their number (R0: 1,680 in all). Either those journals were written without the voucher number or the "VOUCHER PAYMENT" description, or they are not in these two tables. R20.2 was meant to narrow this down.

7. Unresolved risks

#	Risk	Basis	Effect
U1	R20.2 ran from 20:32:25 to 21:08:26 UTC and its result was not captured	[Observed]	phpMyAdmin answered “success” with HTTP 200, but its response held no result table and no message. The raw response was not kept, so the cause is not established. While R20.2 ran, the MyISAM tables were locked for reading, so any local-app write to voucher, account_runing or account_runing_2024 in that window had to wait [Deduced]. The deductions on R20.1 (deduction 8) stay open.
U2	The checks ran under root@localhost	[Observed]	Only the one-SELECT check before each send kept them read-only. A read-only account would make that structural.
U3	phpMyAdmin may record query history or interface preferences in its own storage	[Not established]	Any such write would be outside `avenir`. Checking it would mean reading another schema, which was not approved.
U4	Six routes in section 3 fall outside C0.8, C0.9 and C0.15	[Observed]	They raise, delete or re-point vouchers, or post journals. hotel_payment also sets the flag that blocks B1. A0, D14 and the containment design have not taken them into account.
U5	3,921 authorised vouchers have no authorisation journal under their number in either ledger table	[Observed]	It is not known where their postings are, or whether they exist (R20.2, deduction 8).
U6	R0′s ledger credits to 1-6-8-9750 exceed R23.1′s voucher total by LKR 298,375.00	[Observed]	The ledger rows behind the gap were not read; that some credit has no matching voucher is [Deduced] (deduction 7).

#	Risk	Basis	Effect
U7	The 8 unbalanced journals total Dr 679,985.70 against Cr 230,842.50	[Observed]	The ledger is out by a net Dr of LKR 449,143.20 from these journals alone.
U8	account_runing has its own `aflag` and `Bank_Date` columns	[Observed] T3	No R0 or R20–R23 definition uses them. If they mark rows as void or pending, the counts above may include such rows [Not established].
U9	These are localhost records	your instruction	They say nothing about live (system.avenirholidays.com).

8. Proposals for your decision

None of these has been done. **[Proposal]**

1. **R20.2.** Choose one of two options. Rerun it unchanged, keeping the raw response this time; it takes about 36 minutes and locks the three tables for reading. Or approve a faster wording, for example limiting it to one year at a time. Nothing will be rerun or reworded without your approval.
2. **One more SELECT for the LKR 298,375.00** (U6). For each sup = 0 voucher, it compares the voucher amount with the credits to 1-6-8-9750 under its number:

```
SELECT v.Vnum AS voucher_no, v.Amount AS voucher_amount,
       SUM(a.Cr) AS credits_to_9750, COUNT(DISTINCT a.ID) AS journals
FROM avenir.voucher v
JOIN avenir.account_runing a ON a.Recpt_No = v.Vnum AND a.L_Code = '1-6-8-
9750'
WHERE v.sup = 0 AND v.Aflag = 1
GROUP BY v.Vnum, v.Amount
HAVING SUM(a.Cr) <> v.Amount
ORDER BY v.Vnum;
```

3. **Ravi's A0 pack.** Add these items, for when you decide to send it. Ravi has not been contacted.
   - the three single-leg accrual credits and the two one-sided opening balances;
   - the 24654 and 24734 pair;
   - the two double-looking pairs;
   - the 15 future-dated journals;
   - voucher 7870;
   - the bank code on the 36 sup = 0 transfers against their ledger credit.

4. **Containment.** Before the operations call, extend the A2 section 9 analysis to the six routes in section 3.
5. **Account.** Use a read-only MySQL account for any later checks. Creating it is a permission change for you to make.

9. What the run did and did not do

Nothing in your folder changed during the run, and only single SELECT statements were sent to `avenir`. For the database, that rests on the check made before each send (U2, U3). **[Observed]**

Files.

- In C:\wamp64\www\avenir there were reads only: grep, sed, sha256sum and md5sum.
- The F11 recheck at 21:07 UTC matched the 20:15 values for all 44 files. All 2,487 files still match R0's manifest. No file in the folder, including writable/, changed after 20:10 UTC.
- Copies of the desk controller, Bulk.php and Vouchers.php went to this session's workspace, to compare them with the code copy.
- Working lists (checksums, search output) went to the linked shell's own scratch area, outside your folder.

Statements. Each one was sent from the signed-in phpMyAdmin page to phpMyAdmin's own SQL handler with "show all rows", the same request its SQL tab sends.

Statement	Finished (UTC)	Rows	Result file SHA-256 (start)
T1–T3	first run before 20:31; rerun 20:40:52	1, 1, 36	—
R20.1	20:31:58	26	398d0a71822352b4
R20.2	21:08:26 (ran 36 min)	none captured	25b6b0b0468814e3 (note only)
R20.3	20:59:36	1	de37b37de45d1147
R21.1	20:59:47	8	4379d59e5fcca30c
R21.2	20:59:57	11	0c2af3edf99f106f
R22.1	21:00:07	30	76e90f2be59ce985
R22.2	21:00:22	30	bcec4b4bc43089f1
R23.1	21:00:32	38	27753a65f1e8e49f
R23.2	21:00:41	1	8f40d47f38876a67

Two departures from A2.

- A2 sections 3 and 5 say the statements run one at a time. After 27 minutes I sent R20.3 to R23.2, each alone, while R20.2 was still running, so two statements ran at once from 20:59 to 21:01. The same happened briefly at 20:40, during the T1–T3 recheck you asked for. Their text was not changed.
- The result files are kept in this session's workspace, not on your computer. A2 section 3 says they go in a folder you choose, and none has been chosen.

Not done.

- No write, payment, approval, rejection, authorisation, completion or cancellation action.
- Nothing on live, avenir_rv, the cloud test database or any other schema. T2 and T3 read information_schema filtered to `avenir`.
- No build, test, install, migration, correction, transfer or permission change.
- No contact with Ravi or anyone else, and no records sent.
- r3.3, r3.4, r3.5, the Security proposal and A1 are unchanged. A0, D14 and containment remain pending.

R23.1 in full: the 38 authorised vouchers with sup = 0

Voucher	Id	Date	Type	Bank ledger code	Amount	Finalized	Bank date
